

## Coolant level

Check the level and top up as necessary with 50% SAAB Original Coolant and 50% water.

---

### Important

This mixture also provides effective corrosion protection.

---

Avoid mixing different types of coolant.

In the event of coolant loss, investigate the cause.

---

### Important

Screw the filler cap down hard or the system will not be pressurized, resulting in a lower boiling point and loss of coolant.

---
